

Greenfields

A TenCate Grass Company

**A PERFECT PITCH
FOR EVERY PLAYER**

WHY GREENFIELDS?

GreenFields is a global supplier and innovator of sports turf technology. GreenFields has a breadth of experience in the development, production, installation and maintenance of synthetic sports turf systems, and the ability to provide high quality, innovative products to provide a perfect pitch for every player. All this has enabled GreenFields to become one of the front runners in this industry.

GREENFIELDS OFFERS:

- ▲ Customer satisfaction from system design up to support during the life cycle of a pitch
- ▲ Best value over life products
- ▲ Fit for purpose system certification in close cooperation with our R&D department and accredited laboratories
- ▲ A sustainable business throughout the supply chain, as part of the TenCate Grass Group
- ▲ The highest industry quality standards (FIFA, FIH, WR, etc.) by inhouse testing and external certification

OUR MISSION

To enable everyone to play sport at the best possible pitch every day, everywhere.

OUR VISION

We continuously improve our product portfolio, based on the needs of our customers. Through our system approach, we strive to deliver artificial turf with the best player experience and durability at all sports levels.

OUR EXPERIENCE SPEAKS FOR ITSELF

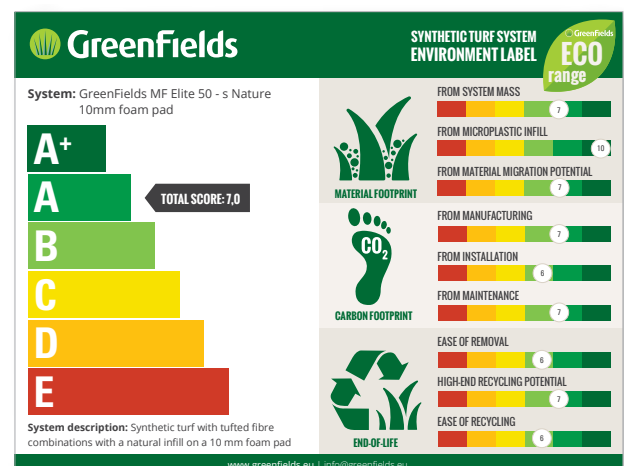

GREENFIELDS ECO-RANGE

On a global scale, society is becoming increasingly aware of the exhaustion of our planet. An expanding lack of space demands optimum use of available land. Increasing water shortage asks for solutions to save water resources. Synthetic turf can provide a sustainable path towards optimising space and saving water resources.

GreenFields has always been at the forefront of innovation and improving sustainability; being one of the first to utilise natural infill within our turf systems and continue to lead the way in high-end non-filled systems for sports applications.

The GreenFields ECO-range covers a range of artificial turf systems (from entry level to high-end) designed with a strong focus on sustainability and durable performance. The systems are labelled via an innovative and robust classification system to illustrate the eco-credentials of each system. The sustainability classification has been developed, tested, and evaluated with the support of the new 'Centre for Turf Innovation' by TenCate Grass.

The classification for each system is expressed with an Environment label, designed to cover the most important aspects for a sustainable system, including: material footprint, carbon footprint, and end-of-life recycling potential.

For more information on our ECO-range please visit our website or contact our office.

FOOTBALL

Football is the world's most played and most popular sport, so it is essential to ensure an optimum playing surface. Over the years, GreenFields has driven innovation in football turf systems, with the most important factor always being the experience of the player.

GreenFields offers a range of football turf systems designed to enhance the game of football and to meet crucial FIFA specifications. We are proud that GreenFields turf is selected by numerous top clubs worldwide for both stadiums and training pitches. Our high-tech woven systems are revolutionising sports turf technology and pushing the boundaries from that of traditional tufting techniques.

FIFA PREFERRED PRODUCER

As a FIFA Preferred Producer, GreenFields is proud to meet the stringent, professional standards set by their quality artificial turf programme. FIFA's aim to protect the interests of end-users and to ensure football artificial turf systems adhere to quality, performance and safety standards, fits in with the GreenFields philosophy to create flawless playing surfaces, at all levels of the game.

FOOTBALL

“

The surface not only has to look good, it has to play well too. And these do!

”

PAUL ASHCROFT
Grounds Manager, Arsenal F.C.

HOCKEY

Hockey is one of the most demanding sports for players; it requires speed, agility and strength, which means that the surface it is played on, must comply with certain standards.

GreenFields is proud to play a role in improving the hockey experience for players around the world. We offer professional water based and sand dressed artificial hockey pitches, and we are able to install these in line with the strict standards set by the FIH (International Hockey Federation).

FIH PREFERRED SUPPLIER

Our innovative systems are tested extensively to meet governing body regulations and have proven to maximise playing characteristics. A hockey field approved by the FIH offers a professional grade playing surface that is suitable for competitive matches from local league to major tournaments such as The Olympic Games and the Hockey World Cup.

“

The new pitch at the Wagener Stadium is magnificent; really fast, doesn't bounce and once played on it's totally perfect!

”

VALENTIN VERGA
AH&BC

RUGBY

Rugby is becoming increasingly popular around the globe. Rugby Union is played in over 100 countries and Rugby League is played in more than 70 nations.

Our artificial grass rugby pitches have been designed to meet crucial World Rugby standards and are popular with a number of top rugby clubs. Our high-tech woven systems are revolutionising sports turf technology and pushing the boundaries from that of traditional tufting techniques.

WORLD RUGBY PREFERRED PRODUCER

GreenFields has earned the World Rugby Preferred Producer status in recognition of the commitment to quality and global track record in manufacturing, maintaining and installing sports turf for rugby.

This Preferred Producer status gives clubs the confidence that the artificial and hybrid turf systems installed by GreenFields meet global standards for the sport. It guarantees that the surface can be used for competitions, training and community activities.

RUGBY

“

The service provided, attention to detail and quality of the pitch was first class.

”

MIKE EDMONDS

Head of Commissioning
Cannock Chase Council

MULTI SPORTS

Multi sports pitches are popular with schools and other educational establishments, because a multi-purpose sports pitch has cost and space saving benefits by having just one surface for multiple sports instead of needing a separate facility for each sport.

A multi sport artificial turf pitch is a safe and practical choice. It replaces dusty, sandy or muddy grass pitches and prevents injuries caused by falling on a hard surface such as a traditional paved playground. As specialists in sports surfaces, GreenFields is able to design and install high quality artificial turf that is suitable for a variety of sports to be played on.

CERTIFIED MULTI-USE SYSTEMS

GreenFields has several systems in her portfolio which are certified by both FIFA and FIH or WR as quality systems. These multi-use products can be used for official matches.

MULTI
SPORTS

“

The children will benefit hugely from the facility and we are extremely proud of this investment.

”

LOUISE STRANGE
Bursar
Berkhampstead School

GREENFIELDS SYSTEM DESIGN

GreenFields maintains a strong dedication and commitment to developing and implementing groundbreaking technologies through our high quality artificial turf systems. Through exhaustive testing, research and development coupled with strategic alliances, university studies, constant communication with our customers and international relations, GreenFields has an indispensable formula for always moving forward and constantly improving.

FILLED PERFORMANCE SYSTEMS

Well known in the industry as 3G systems for applications like soccer, rugby or multi-use. GreenFields offers a wide range of artificial turf products with sand & performance infill only, or with an elastic layer or shockpad, to build the perfect system for each application.

STRAIGHT TUFTED TURF

In different pileheights and stitchrates with durable monofilament fibres to match the system design.

MULTI-FIBRE & DOUBLE TUFT

Premium tufted products with fibre or yarn combinations to add additional benefits to the system.

WOVEN TURF

GreenFields MX Elite; the ultimate 3G product with exceptional performance and durability.

HYBRID TURF

The best of two worlds: artificial reinforcement of natural grass for soccer, rugby, or other high wear applications where natural grass is preferred. A hybrid reinforcement can increase the playing hours up to three times.

WOVEN HYBRID TURF

Our XtraGrass product is a unique hybrid solution with unparalleled durability and performance due to the woven structure with partly biodegradable backing and stripe coating.

LAY AND PLAY

XtraGrass is very suitable to be used for sods farming to create a lay and play solution.

NON-FILLED SYSTEMS

The next generation of artificial turf with a simplified system design; the non-filled systems have a performance thatch layer of artificial turf fibres which replaces the performance infill. These systems are especially suitable for soccer, multi-use & community pitches.

TUFTED NON-INFILL

Low pile tufted product with durable straight monofilament fibres and a performance thatch layer.

WOVEN NON-INFILL

The GreenFields MX NF, the ultimate non-infill solution, offering more durability, higher performance and a stunning pitch to play on.

SAND OR WATER BASED SYSTEMS

For non-contact sports like hockey, tennis or multi-use, GreenFields offers a wide range of short pile densely tufted products to build extremely durable and low maintenance systems for high speed play and ultimate ball control.

TUFTED FIBRILLATED TAPE

Extremely durable short pile and sand dressed systems which are very low on maintenance.

TUFTED TEXTURIZED MONOFILAMENT

The GreenFields TX product range, well appreciated by (semi) professional players for taking the game to a next level.
